

Heating costs reduction - scene

Scene is triggered on the change of state of given Fibaro Door/Window Sensor. If door or window opens, adequate heating schedule will be set to vacation mode, with defined temperature. When closed, scene will set it back to scheduled one.

Installation

```
--[[
%% properties
0 value
%% globals
--]]

local schedule = {
    id = 0, --Change to ID of your heating schedule
    idleTemp = 0 --Temperature that will be applied when window or door is opened
}

sensor = 0 --ID of Door/Window Sensor, remember to adjust triggering device

--Do not modify code below this line

local function getMethod(requestUrl, successCallback, errorCallback)
```

After importing and saving scene, adjust all highlighted values
